My intention is to create imagery where there is no starting or finishing point, capturing a fragment of infinity. In this regard my work has a strong correlation with emergence theory, where complex patterns emerge out of simple interactions.

The vibration created by the kinetic resonance of the sonic network series occupies a sensory dimension, which exists between sound and vision giving a visual expression to its physicality.

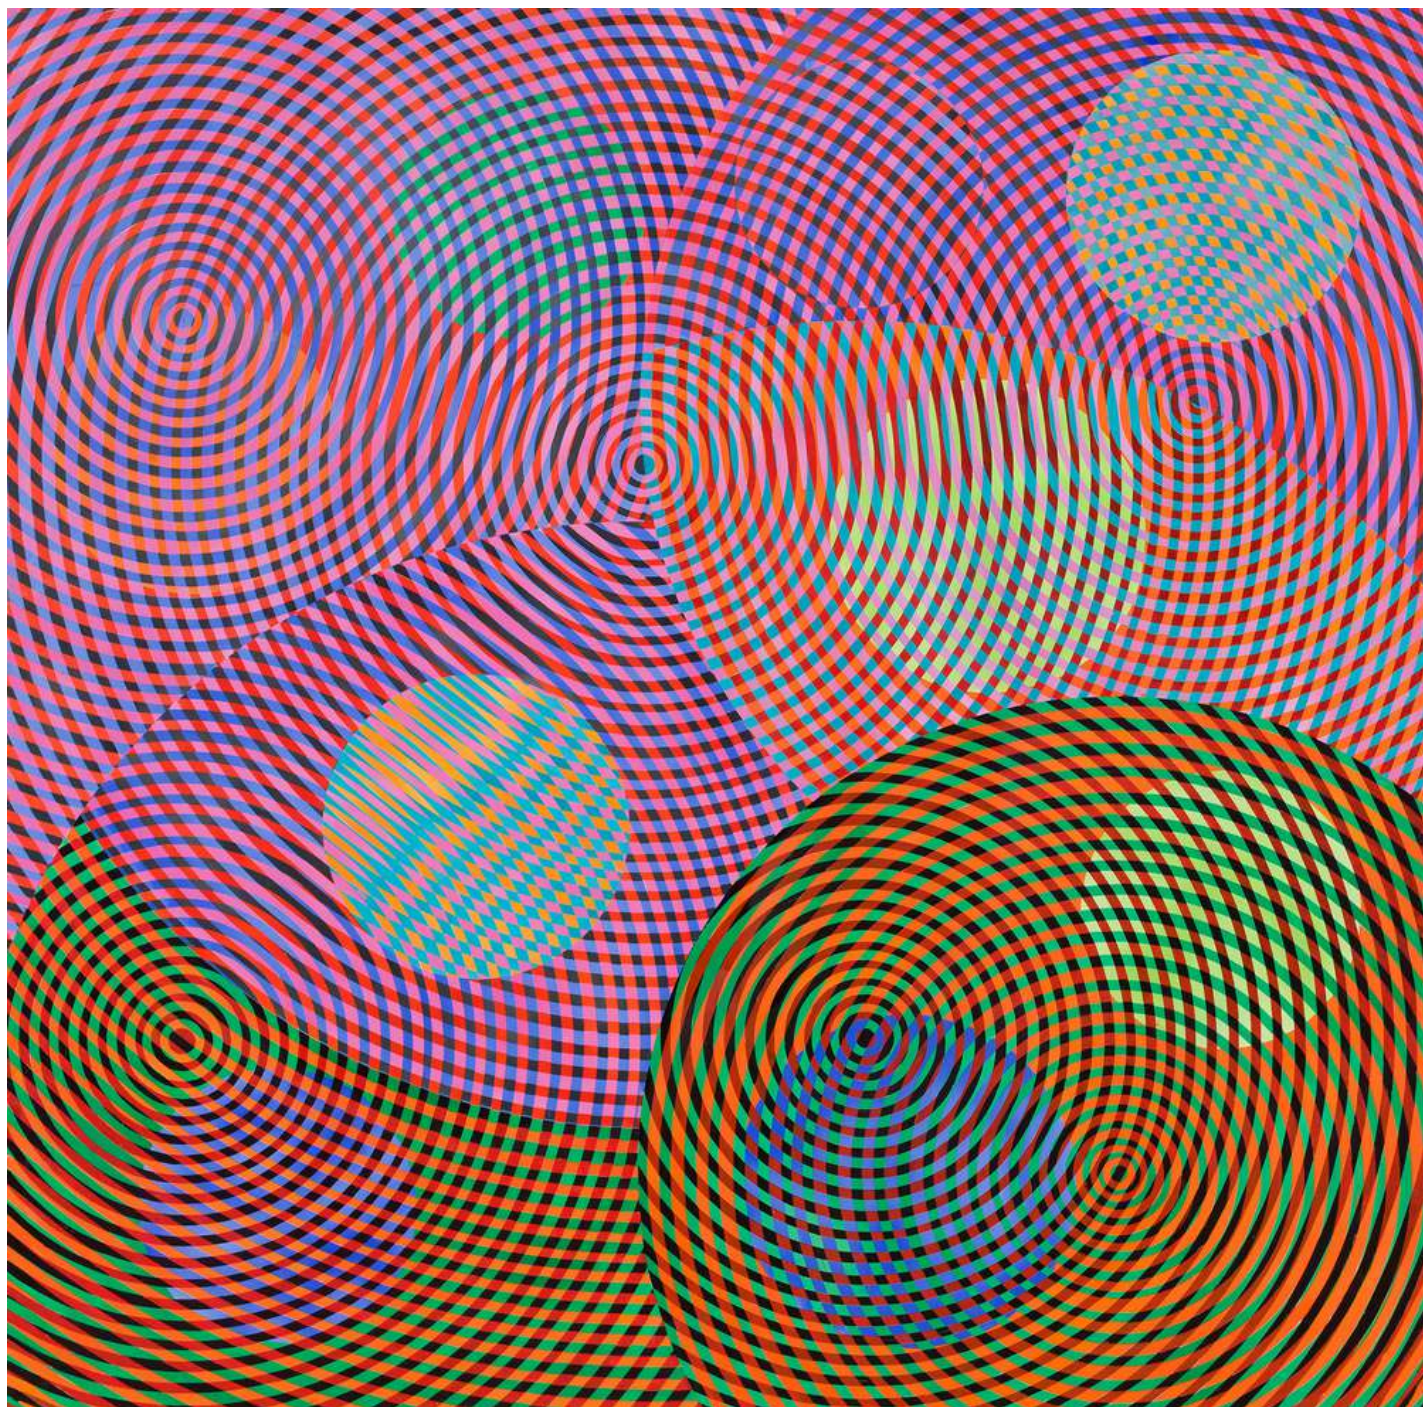

My concern is with the physical reaction the viewer has to my paintings and how that vibrates through their body overwhelming them with linear tonal and chromatic variations which perpetually interact with each other creating a sense of perpetual movement.

An aesthetic encoded with an optimistic energy, creating an uplifting experience mesmerising the viewer, with the intention of inspiring them to connect with own creativity by overwhelming them with a sonic/visual spectacle.
